DS furnace is a modern equipment that melts its metal or alloy by medium frequency induction heating under vacuum conditions, forms thermal gradient by using specially designed holding furnace and cooling system, and prepares directional solidification and single crystal parts through pull-down mechanism. It can strictly control the temperature and alloy composition of materials. It is mainly used to produce silver based, nickel based, iron-based and cobalt based ultra-high temperature alloys. The high-quality products made of these alloys are widely used in aviation turbine engine industry, automobile, biomedicine, chemistry, leisure and entertainment industries.
