The global DTRO Membrane market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

DTRO membrane, namely Disc Tube Reverse Osmosis Membrane, is a membrane component specially used to treat high-concentration sewage. It consists of a three-layer structure of a support layer, a dense layer and a contact layer. The support layer provides the mechanical stability of the membrane, the dense layer controls the water permeability of the membrane, and the contact layer provides the anti-pollution performance of the membrane. The working principle of DTRO membrane is to separate water and solutes through forward osmosis, concentration and re-osmosis. It has the characteristics of high pressure resistance, high SDI resistance, high COD resistance, wide flow channel design, easy cleaning and maintenance, etc. It is widely used in the fields of landfill leachate treatment, electroplating wastewater treatment, chemical wastewater treatment, coal and mining wastewater treatment, etc., and performs well in treating high-concentration and high-difficulty wastewater.

United States market for DTRO Membrane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for DTRO Membrane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for DTRO Membrane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
