The wafer handling robot market is divided into single arm wafer handling robots and dual arm wafer handling robots. Dual arm wafer handling robots account for a larger sales share as they provide greater flexibility and versatility in handling complex wafer handling tasks. Two independently operated robotic arms can simultaneously perform grasping, rotating, and other movements, thereby improving work efficiency and reducing cycle time. The dual arm configuration can achieve more advanced functions, such as multi wafer processing, wafer flipping, and alignment operations. However, due to the complexity and advanced functionality of dual arm robots, the cost of dual arm robots is usually higher compared to single arm robots.
