The global Dual-Axis Positioning Stage market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The equipment configuration generally consists of stages in each axis direction stacked on top of each other. A dual-axis positioning stage (XY-axis stage) has two axes: an X-axis for left/right movement and a Y-axis for vertical movement. The use of this stage has the advantage of facilitating positioning.

The main applications of 2-axis stages are for manufacturing semiconductor devices and microscopic observation, which require positioning. There are various types of stages with positioning accuracy ranging from low precision to high precision depending on the guide system and feed mechanism, and they have different features.
