Dual-Chamber Vacuum Oil Quenching Furnace is a heat treatment system featuring two separate chambers for heating and cooling, used for precision oil quenching under vacuum conditions. This furnace heats materials in a vacuum environment, then transfers them to the oil quenching chamber for rapid cooling, minimizing deformation and enhancing hardness. It's widely applied in aerospace, automotive, mold, and other industries for the treatment of high-strength alloy steels and other metals. The dual-chamber design reduces contamination and oxidation, ensuring high-quality processing.
