Abstracts

The global Dual Channel Networked Video Encoder market size is predicted to grow from US$ 87.55 million in 2025 to US$ 117 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Global sales of dual-channel networked video encoders will reach approximately 210,000 units in 2024, with an average price of approximately $410. These specialized encoders simultaneously compress, convert, and transmit two independent video sources in real time. They are widely used in security surveillance (dual-camera systems), in-vehicle video recording and surround view, medical image acquisition, distance education, live streaming, and multi-view surveillance centers. Compared to single-channel products, the dual-channel design effectively reduces device count, cabling, and power consumption in multi-camera systems, while ensuring synchronization and consistent image quality. It supports mainstream H.264/H.265 standards and multi-protocol streaming. Its upstream supply primarily relies on video capture chips, DSP/FPGA processors, storage, and network modules, while its downstream supply connects with security integrators, automotive electronics manufacturers, streaming platforms, and system integration service providers, forming a complete supply chain from semiconductors to end-user applications.

United States market for Dual Channel Networked Video Encoder is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Dual Channel Networked Video Encoder is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
