A dual component holder is a device used to clamp and hold two components or assemblies. It is usually made of metal or other strong material with proper shape and structure to ensure the stability and safety of the grip. Dual Component Clamping Frames are designed to hold two components or assemblies together so that they remain stable relative to each other. Such racks typically feature the following: Strong Clamping Force: Dual-element clamping racks are usually designed with sufficient clamping force to ensure that the clamped components do not move or loosen relative to each other. Adjustability: Shelves often have adjustable features to accommodate

elements of different sizes, shapes, and locations. This allows for fine-tuning and adaptation to various application scenarios as required. **Stability:** Dual component holders should be able to provide stable support and fixation to ensure that the clamped components do not experience unnecessary vibration or deformation. **Safety:** The clamping frame should have appropriate safety features to prevent damage, accidental injury or other safety hazards during the clamping process. Dual-element holders are used in a wide range of applications and are often found in manufacturing, laboratories, and process industries. It can be used to clamp and fix parts, components, workpieces, samples, etc. to achieve stable operation and processing.
