The global Dual Frequency Laser market size is predicted to grow from US$ 448 million in 2025 to US$ 584 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

A dual-frequency laser is a laser that can generate two lasers of different frequencies in a laser resonant cavity at the same time. Its working principle is to use two interacting light modes to generate a light signal with a fixed frequency difference. This fixed frequency difference is called the frequency interval of the dual-frequency laser. The frequency interval of the dual-frequency laser determines its spectral characteristics, and the frequency interval can be adjusted by changing the structure of the laser, the control circuit, the temperature and other factors.

United States market for Dual Frequency Laser is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
