The global Dual-Fuel Engines market size is predicted to grow from US\$ 1987 million in 2025 to US\$ 1730 million in 2031; it is expected to grow at a CAGR of -2.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Dual fuel engines make use of both natural gas and diesel or gasoline simultaneously as a fuel source to operate. Among the two types of fuel, natural gas is used the most (accounting for 90% of the overall fuel mix). Diesel merely serves as a spark plug, which ignites under pressure and, in turn, ignites the compressed gas and air mixture. Retaining the use of diesel, ensures that the fuel, its compression ratio, and associated efficiency remains intact, while the use of natural gas ensures less operating cost as well as low levels of emissions.

Global Dual Fuel Engine key players include WinGD, MAN, etc. Global top two manufacturers hold a share about 90%.

Asia Pacific is the largest market, with a share about 60%, followed by Europe, and North America, both have a share over 30 percent.

In terms of product, Two-Stroke is the largest segment, with a share over 65%. And in terms of application, the largest application is Cargo Ship, followed by Cruise Ship, etc.
