Dual fuel low nitrogen burners are combustion equipment that can use two different fuels (such as natural gas and heavy oil) at the same time, and are designed to reduce nitrogen oxide (NOx) emissions. By optimizing the combustion process and adopting advanced low-nitrogen technology, it can effectively reduce nitrogen oxides generated by the reaction of nitrogen and oxygen at high temperatures, thereby reducing pollutant emissions. It is widely used in industrial boilers, thermal power generation, metallurgy and other fields, not only meeting environmental protection requirements, but also improving energy efficiency and reducing energy consumption. This type of burner has both fuel switching flexibility and environmental performance.
