A double-head metering pump is a device used to accurately meter and deliver liquids or chemicals. It has two pump heads that can work simultaneously or alternately to achieve constant metering and delivery of fluid.

The double-head metering pump consists of two pump heads. Set the required flow or pressure and select the working mode of the double-head metering pump. The double-head metering pump is usually equipped with a control system that can monitor and feedback each pump head. The working status and metering data of the pump, the liquid is sucked from the container or storage tank through the respective pump head, and delivered to the target position. The advantages of double-head metering pumps include: high-precision metering, high reliability, convenient operation, and wide application. It is used for accurate metering and delivery of various liquids or chemicals to meet the production and process requirements of different industries.
