Dual-head Variable Angle SPECT is a type of Single Photon Emission Computed Tomography (SPECT) imaging system equipped with two gamma camera detectors that can be positioned at variable angles. This design allows flexible detector configurations—commonly at 90°, 180°, or custom angles—to optimize image resolution and sensitivity for different clinical applications, such as cardiac, neurological, or oncological imaging. The system enhances diagnostic accuracy by enabling more complete and precise data acquisition through dual-view perspectives.

United States market for Dual-head Variable Angle SPECT is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
