Abstracts

The global Dual Lens Camera Smartphone market size is predicted to grow from US\$ 858 million in 2025 to US\$ 1883 million in 2031; it is expected to grow at a CAGR of 14.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

With the growing importance of camera performance to smartphone makers and users, manufacturers have worked hard to add features and to improve image quality. However, users also want thin phones, which greatly limits the size of the individual camera modules that can be used. The small Z-height, as the industry refers to the thickness of a phone, has caused designers to make use of the larger width and height of phones by adding additional cameras to their designs. Having multiple cameras has made an array of new features possible—zoom, better HDR, portrait modes, 3D, and low-light photography.

The report offers an up-to-date analysis regarding the current global market scenario, latest trends and drivers, and the overall market environment. The market is driven by the growing popularity of social networking applications, increasing adoption of mobile AR and the use of CMOS sensors in camera modules. In addition, growing popularity of social networking applications is anticipated to boost the growth of the market as well.
