According to this study, the global Dual Planetary Slurry Mixing Solution market size will reach US\$ 477 million by 2031.

The Dual Planetary Slurry Mixing Solution is a slurry mixing technical approach based on a dual planetary mixing device. In this solution, the dual planetary mixer employs a unique motion mode combining revolution and rotation, enabling the mixing paddles to create a complex and efficient three-dimensional mixing trajectory within the container. The paddles apply various forces such as shearing, dispersing, and mixing to the slurry, promoting thorough contact and uniform distribution of all components, thus achieving a highly homogeneous slurry state with adjustable mixing parameters according to slurry properties.
