The vitreous cuttersis is the main tool for vitrectomy surgery and the core component of the vitrectomy instrument. It can quickly remove the diseased vitreous after piercing the eyeball. The vitrectomy head of the dual air path drive system is controlled by two air source systems for cutting and resetting respectively, so that the resetting of the vitrectomy head no longer relies on the mechanical elasticity of the spring structure, but efficiently drives the vitrectomy head through the air source system. Not only does it significantly improve surgical efficiency and treatment accuracy, it also improves the doctor's operating experience.
