Dual ridged horn antenna is a specialized type of horn antenna that features two ridges or flares, extending along the length of the horn. It is designed to operate in a wide frequency range and exhibits a broad bandwidth.

The dual ridged horn antenna offers improved performance compared to traditional horn antennas, particularly in terms of gain and bandwidth. The ridges help to reduce unwanted reflections and suppresses unwanted modes, resulting in better impedance matching and reduced sidelobe levels.

This type of antenna is often utilized in applications that require high-gain, wideband performance, and low sidelobe levels. It finds use in microwave communication systems, radar systems, wireless networks, and satellite communications where a wide coverage area and good signal fidelity are crucial.
