The global Dual Schottky Diode market size is predicted to grow from US$ 630 million in 2025 to US$ 1007 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Schottky diodes are metal-semiconductor devices made of precious metals (gold, silver, aluminum, platinum, etc.) A as the positive electrode and N-type semiconductor B as the negative electrode. Dual Schottky barrier diodes are designed for high speed switching applications, circuit protection, and voltage clamping. Extremely low forward voltage reduces conduction loss.

Compared with ordinary diodes, Schottky diodes have the advantages of reduced forward voltage, short recovery time of reverse charge, high switching frequency, low power consumption, large current, strong ability to withstand surge current, good resistance to high temperature, etc. They can be used as rectifier diodes, Flyback diode, detection diodes, protection diodes, etc. in drivers, frequency converters, switching power supplies and other circuits. Terminal applications include power, energy, automobiles, household appliances Consumer electronics, smart home, etc. From the perspective of market structure, the global Schottky diode market is currently dominated by companies from developed countries such as the United States, Japan, and Europe, which have an early start and strong research and development capabilities, with a high industry concentration. With the continuous emergence of high-tech industries and the continuous upgrading of Schottky diode technology, the application field of Schottky diode continues to expand. At present, Schottky diode has been widely used in the field of new energy Charging station, and the market development prospect is broad.
