The global Dual Wavelength AR Coating market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Dual wavelength anti reflection film is an optical thin film designed to enhance light transmittance and reduce reflection at specific two wavelengths. It can produce low reflection and high transmittance at both different wavelengths. By precisely controlling the thickness and refractive index of the anti reflection film, the reflected light at two specific wavelengths can cancel each other out, thereby achieving high transmittance.
