Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

It can debone the left and right thighs, calves and wing roots of ducks, with a high-speed output of 35 pcs/min. Not only are the calves and large wing roots deboned, but the knuckles are severed below the diaphragm, releasing the tendons. In the second stage, the bone will be pushed through the diaphragm, deboning the product. When the piston retracts, the meat remains on the diaphragm, is pulled onto the outfeed conveyor, and the bone is also transported out of the machine. High output, multi-function and high speed are the three main performances of this model.
