A Duct Air Conditioner is a specialized air conditioning system where the intake and exhaust ports are separated from the main body. Unlike household air conditioners with integrated ports, Duct Air Conditioners are designed for commercial spaces, allowing for centralized control of multiple rooms. They adjust air temperature using a main unit, then distribute it via ducts to various spaces.

These systems are widely used in stores, business facilities, and buildings, offering design flexibility and a clean appearance. They allow for both centralized and individual room temperature control, making them ideal for spaces where interior design is key. In addition, they are used in hospitals, schools, hotels, and condominiums for efficient, space-saving, and quiet operation.
