Duct-mounted access doors are designed to provide easy, low-cost access to duct assemblies. The insulated door panels and the connection between the door and the body ensure a tight seal without obstruction inside the air system. Due to the smaller size, the access door to which the pipe is installed is used for the inspection process. These access doors provide access to selected equipment or restricted areas. They are usually small hinged doors that lead to compartments. However, roof hatches and floor hatches - a separate product category - are usually excluded. They can be recessed, flush, and ready with shutters or vents to allow air to float. An access panel with see-through windows shall also be provided. Pipe-mounted access doors should be used with care to their full advantage and to prevent mold build-up. Duct panels can be found in bulkheads and ceilings in buildings. From time to time they follow the room and shape; thus, they can bend. Pipe-mounted access doors help create doorways for hard-to-reach areas.
