The global Dunaliella Salina market size is predicted to grow from US\$ 219 million in 2025 to US\$ 327 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Dunaliella salina is a type of unicellular green algae that is highly tolerant to salt. It is a halophile, meaning it thrives in environments with high salt concentrations. Dunaliella salina is often found in salt lakes, salt marshes, and other hypersaline environments.

This alga is known for its ability to produce large amounts of beta-carotene, a carotenoid pigment that gives it its characteristic red color under certain conditions. Beta-carotene is a powerful antioxidant that has been linked to various health benefits, including improved vision, reduced risk of chronic diseases, and enhanced immune function.

Dunaliella salina is also a source of other valuable compounds, such as glycerol and fatty acids. These substances have potential applications in various industries, including food, cosmetics, and pharmaceuticals.

Due to its tolerance to extreme conditions and its ability to produce valuable compounds, Dunaliella salina is a promising organism for commercial cultivation. It is currently being studied for its potential use in biofuels, nutraceuticals, and other applications.

United States market for Dunaliella Salina is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
