Dural repair refers to the medical procedures and techniques used to repair the dura mater, which is the outermost layer of the three membranes (meninges) covering the brain and spinal cord. The dura mater serves as a protective barrier for the central nervous system. When it is damaged, either through trauma, surgery, or other causes, dural repair becomes necessary to restore the integrity of the meninges and prevent complications such as cerebrospinal fluid (CSF) leaks.

The demand for dural repair may be influenced by the overall number of neurosurgical and spinal procedures. As the number of these surgeries increases, the demand for dural repair products and technologies may also rise.
