Dust suppression control enhances the properties of concrete admixtures. Dust suppression control chemicals used at construction sites help reduce fugitive dust particles in the air. This results in better site visibility and better health of employees and people living in surrounding areas. The global construction industry is expanding at a significant pace. This is anticipated to increase dust emissions. In turn, this is projected to drive the demand for dust suppression control chemicals such as magnesium chloride, calcium chloride, lignosulfonates, polymer emulsion, and petroleum resins in the next few years. Additionally, rapid urbanization in developing countries such as China and India is likely to drive the overall construction output in these countries in the near future. This is anticipated to boost the dust suppression control market in China and India during the forecast period. Thus, demand for dust suppression control is estimated to rise in the near future.
