The global DUV Lithography Machine market size is predicted to grow from US\$ 15900 million in 2025 to US\$ 22620 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Advancements in fabrication techniques, especially extreme ultraviolet (EUV) and deep ultraviolet (DUV) lithography, are revolutionizing the semiconductor manufacturing process, enabling increasingly miniaturized and efficient semiconductor components with significant improvements in transistor density, performance, and energy efficiency.

Extreme ultraviolet (EUV) lithography is a cutting-edge semiconductor fabrication technique that employs very short wavelengths of 13.5 nm, which is 14 times smaller than the other advanced lithography technique, deep ultraviolet (DUV) lithography with wavelengths of 193 nm. Such short wavelengths enable microchip circuit and transistor production at extremely small nodes, such as 7nm, 5nm and 3nm, achieving unprecedented precision and resolution levels in semiconductor manufacturing.

This report studies the DUV Lithography Equipment, include the ArF dry, ArF immersion and KrF Lithography Equipment.

The global semiconductor lithography machine market is monopolized by three companies, including ASML, Nikon and Canon. ASML is the largest manufacturer, accounting for more than 90% of the market share; Nikon and Canon account for 5%

and 5% of the market share respectively.

The global market for semiconductor was estimated at US\$ 526.8 billion in the year 2023, is projected to US\$ 780.7 billion by 2030. IC Manufacturing is the process used to manufacture semiconductor devices, typically integrated circuits (ICs) such as computer processors, microcontrollers, and memory chips (such as NAND flash and DRAM). According to our research, the global semiconductor manufacturing (wafer fabrication) market is projected to grow from US\$ 251.7 billion in 2023 to US\$ 506.5 billion by 2030, at a Compound Annual Growth Rate (CAGR) of 40.49% during the forecast period. This will drive rapid growth of global Semiconductor Lithography Equipment.
