## Abstracts

The global DUV Photodiodes market size is predicted to grow from US$ 184 million in 2025 to US$ 286 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2024, global production of DUV Photodiodes reached approximately 1.5 million units, with an average selling price of approximately US$118 per unit. Single-line production capacity is approximately 150,000 units per year, with an average gross profit margin of approximately 35-44%. DUV Photodiodes are specialized photodiodes designed to detect deep ultraviolet light in the 200-300 nanometer wavelength range, typically with extended sensitivity to shorter wavelengths of 190 nanometers. They utilize the intrinsic photoelectric effect of semiconductors to convert deep ultraviolet light signals into current or voltage signals. They are primarily used in applications requiring high-precision ultraviolet light detection, such as analysis, medical treatment, and environmental monitoring.

The core of the upstream supply chain for DUV Photodiodes is high-quality, large-scale aluminum gallium nitride epitaxial substrates and semiconductor equipment for high-precision lithography, etching, and thin-film deposition. The downstream supply chain directly targets the end market, primarily including civilian and industrial equipment for efficient sterilization of water, air, and surfaces, as well as scientific research and medical instruments for biochemical testing and high-precision analysis.

United States market for DUV Photodiodes is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for DUV Photodiodes is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
