The global DWS Sorting Equipment market size is predicted to grow from US\$ 559 million in 2025 to US\$ 891 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

DWS Sorting Equipment is an intelligent logistics equipment that integrates automatic weighing (Weight), measurement (Dimension) and scanning (Scanning) functions. It adopts high-precision sensors, 3D vision technology, laser ranging and image processing algorithms. It can quickly and non-contactly measure the length, width, height, volume and weight of the package, identify the one-dimensional/two-dimensional barcode information in real time, and synchronize it to the logistics management platform through the cloud system. It supports accurate data collection (error rate less than 1%) and efficient processing (single device processing speed reaches 2000-3000 pieces/hour). It is widely used in e-commerce logistics, warehousing management, express sorting and other scenarios, realizing automatic collection of package information, optimization of sorting routes and reduction of transportation costs, helping logistics companies improve sorting efficiency, reduce labor costs and optimize transportation planning.
