Dye dispersant is a chemical agent used to disperse dyes, which can form a stable and uniform dispersion system of dyes in water. Dye dispersants usually have polar groups and non-polar groups, the former can combine with dye molecules, and the latter can combine with water molecules. Dye dispersants can reduce the friction between dye particles and prevent them from aggregating in water, thereby improving the dyeing effect of the dye.

As people's requirements for textile quality increase, the demand for dye dispersants is also increasing. At the same time, as market competition intensifies, in order to meet customer needs, the development of new dye dispersants has also become an important means of competition.
