The global Dye Sublimation Ribbons market size is predicted to grow from US$ 159 million in 2025 to US$ 235 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

A dye sublimation ribbon is a special type of ribbon used in thermal transfer printing technology, which applies the principle of sublimation to transfer colorants from the ribbon onto the substrate. During the process, the print head heats the solid dye on the ribbon, causing it to directly sublimate into a gas and penetrate into the printing medium—such as specially coated paper, cards, or textiles—thereby producing vivid, richly layered, and highly durable images. Unlike traditional barcode ribbons, dye-sublimation ribbons can print not only black-and-white information but also deliver high-quality color output, making them widely used in applications such as ID card printing, photo printing, labeling, and textile printing. In 2024, global dye sublimation ribbon sales volume reached approximately 260 million sq m, with an average global market price of around US$ 0.6 per sq m. Raw materials of dye sublimation ribbon cover PET film, pigment, carbon black, etc.
