The global Dye Transfer Inhibitor for Laundry Detergents market size is predicted to grow from US\$ 255 million in 2025 to US\$ 361 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

When fabrics of different shades are washed together, there exists the danger that the dye of the coloured fabric is washed out into the washing water. Thus fabrics might be recoloured accidentally. Polyvinylpyrrolidone (PVP) homopolymers or PVP-copolymers inhibit the transfer of dye to the fabric.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
