The global Dynamic Fiber Laser Marking Machine market size is predicted to grow from US\$ 147 million in 2025 to US\$ 190 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Dynamic fiber laser marking machine is a high-precision surface processing equipment based on the collaborative work of fiber laser and high-speed galvanometer scanning system. Its core principle is to generate high-energy density pulse or continuous laser beam through fiber laser, and through the rapid deflection of high-speed galvanometer (usually X-Y two-dimensional scanning galvanometer), combined with F-Theta field mirror focusing, the laser beam is dynamically projected onto the workpiece surface in a non-contact manner to achieve high-resolution, high-speed pattern, text or QR code and other identification processing. The equipment utilizes the wavelength characteristics of fiber laser (usually 1064nm) and beam quality advantages (M?
