A Dynamic Gas Distribution System (DGDS) is an advanced technology used in industries that require precise and real-time control of gas flow and distribution. It is designed to dynamically manage the supply and mixture of various gases, ensuring optimal conditions for specific processes, such as semiconductor manufacturing, chemical processing, or laboratory environments. Unlike static systems, DGDS can adjust gas flow rates, pressure, and composition on demand, adapting to changing process needs with high accuracy and efficiency. This system improves operational flexibility, reduces gas wastage, enhances process control, and ensures consistent product quality. It is commonly used in high-tech industries where precision and reliability in gas handling are critical.
