The global Dynamic Glazing Products market size is predicted to grow from US\$ 356 million in 2025 to US\$ 856 million in 2032; it is expected to grow at a CAGR of 13.6% from 2026 to 2032.

Dynamic Glazing (DG) products are any fenestration product with the ability to change its performance properties, allowing the user to control their environment by tinting (or darkening) a window with the flip of a switch or by raising and lowering a shade positioned between panes of glass. Some windows and doors can change their performance automatically in response to a control or environmental signal. These high-performance windows, sometimes referred to as "smart windows," provide a variety of benefits, including reduced energy costs due to controlled daylighting and unwanted heat gain (or loss).

Due to the increasing adoption rate of smart glass in trains, for example, in South Korea, the monorail train has windows that automatically fog while passing by the apartments close to the train. The glazing takes place when the window's light transmission properties are transformed with heat, light, or voltage to the surface. The growing use of this transportation field has created a huge demand for smart glass. It is expected that smart glass installation in automobiles can offer around a solar reduction of 40% and UV protection of 98% for making the cabins of vehicles more comfortable. These are the opportunities in dynamic glazing market.
