The Dynamic Vision Tester is an advanced diagnostic equipment used in optometry and ophthalmology to assess an individual's visual function in conditions that mimic real-world scenarios involving motion. Unlike static vision tests that primarily evaluate visual acuity at rest, a dynamic vision tester evaluates how well a person's visual system performs during movement, both of the eyes and the objects being viewed. This type of assessment is crucial for understanding visual performance related to activities such as sports, driving, and reading, where the ability to track moving objects, adapt focus rapidly, and maintain visual stability is vital.

The global Dynamic Vision Tester market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
