Dynamic X-ray planar CT is an advanced industrial non-destructive testing technology that uses high-speed rotating X-ray sources and detector arrays to obtain dynamic tomographic images of the internal three-dimensional structure of an object in real time. Compared with traditional CT, it can achieve millisecond-level rapid scanning during object movement or continuous production, and combined with AI real-time reconstruction algorithms, it can significantly improve detection efficiency. This technology is widely used in new energy vehicle battery production line testing, dynamic fatigue analysis of aerospace composite materials, electronic packaging welding process monitoring and other fields, meeting the needs of Industry 4.0 for online full inspection and intelligent quality control.
