According to our LPI (LP Information) latest study, the global Dysphagia Supplements market size was valued at US\$ 465.9 million in 2023. With growing demand in downstream market, the Dysphagia Supplements is forecast to a readjusted size of US\$ 610.7 million by 2030 with a CAGR of 3.9% during review period.

The research report highlights the growth potential of the global Dysphagia Supplements market. Dysphagia Supplements are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Dysphagia Supplements. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Dysphagia Supplements market.

According to statistics compiled by the CDC, almost 800,000 people are afflicted by strokes every year in the U.S. alone and nearly half of them have some sort of swallowing disorders. In addition, the National Foundation of Swallowing Disorders estimates that 22% of the American geriatric population suffers from dysphagia, making the growth potential of the North America dysphagia supplements market very high indeed. A number of studies have concluded that almost 600,000 individuals are troubled by swallowing disorders and almost 10 million U.S. patients undergo annual treatment for swallowing difficulties.

Dysphagia can be diagnosed by flexible endoscopy, X-ray, and videofluoroscopy procedures. However, it is not always feasible to conduct these procedures on

dysphagia patients. For e.g. – videofluoroscopy only observes the mouth area from the top of the chest to the pharynx. It cannot detect the esophagus abnormalities and a barium swallow exam is performed for this purpose. A lack of standardized diagnostic tests is seriously restraining the growth of the dysphagia supplements market.
