E-beam evaporation is a physical vapor deposition technique used to deposit thin films of material onto a substrate. In this process, a high-energy electron beam is used to heat a target material in a vacuum chamber, causing it to evaporate and deposit onto the substrate. This technique is commonly used in the semiconductor, optics, and electronics industries to create thin films with precise thickness and composition. E-beam evaporation solutions refer to the equipment and technology used to perform this process effectively and efficiently.
