E-Bike intelligent battery swapping cabinet is designed to address the issues of slow charging and charging safety for low-speed electric vehicles. It is primarily used to solve the travel problems for people who frequently use electric bicycles by allowing them to deposit and retrieve batteries through scanning codes and other methods. The swap cabinet typically includes an integrated charging station that automatically charges the batteries placed inside. It mainly consists of components such as a mechanical cabinet structure, electrical control structure, battery charging and management structure, communication and safety protection structure. When exchanging batteries, depleted batteries are connected to these charging stations to ensure they are ready for the next swap. This approach effectively resolves the issue of electric vehicle range anxiety.
