E-cigarette is a kind of electronic product that imitates cigarette. It has the same appearance, smoke, taste and feeling as cigarette. It is a kind of product that can be inhaled by users after nicotine is turned into steam by means of atomization. Electronic cigarette is composed of atomizer, control chip and battery. When the electronic cigarette is working, the liquid of the electronic cigarette is transferred to the atomization room, and then connected through the smoking air switch, and then the control chip (lithium battery drive) controls the heating of the atomization room to generate the vapor fog simulating the smoke, so as to meet the pleasure of smokers and the psychological habits developed for many years.
