E-coating, also known as electrocoating, electropainting etc. is a high-tech process that has been developed over the last fifty years. The E-coat process was originally developed for applying an anti-corrosive coating over steel car bodies. E-coats processes are used for coating a wide range of consumer goods including hardware, jewellery, eyeglass frames, giftware and many other items.

Users recognize E-coat's ability to paint high production volumes of parts with a unique combination of decoration and protection. Material utilization is close to 100%. This high production efficiency coupled with advanced quality results in lower unit costs.

In the US, the main producers of e-Coat electronic Coating are Axalta Coating Systems, PPG, Valspar, BASF and Nippon Paint, which account for about 90% of the market.
