## Abstracts

The global E-commerce Jewelry Photography Services market size is predicted to grow from US\$ 5640 million in 2025 to US\$ 10346 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

E-commerce jewelry photography services refer to a type of commercial image service aimed at online sales and brand promotion. It utilizes professional photography, macro lenses, meticulous lighting, and high-end post-production retouching techniques to provide high-precision visual presentation of jewelry products such as rings, necklaces, and earrings. Its core lies in realistically restoring the luster of gemstones, the texture of metals, and the details of craftsmanship. At the same time, it enhances product appeal and trust through visual aesthetics, thereby increasing click-through rates and conversion rates. It is widely used in e-commerce platform product pages, brand websites, social media marketing, and digital advertising, and is a key link in the digital sales system of the jewelry industry.

The e-commerce jewelry photography service industry will continue to grow as jewelry sales channels shift online. Especially with social media and short video platforms driving consumer decisions, high-quality visual content has become a core factor influencing user trust and purchase conversion. At the same time, the continuous improvement of visual standards by high-end jewelry brands is also driving the industry towards refinement and high-end development. On the other hand, 3D modeling and AI-generated image technology are gradually penetrating the basic e-commerce photography field, improving efficiency and reducing costs. However, in the high-end jewelry sector, due to the extreme requirements for light control, material representation, and brand tone, professional photography remains irreplaceable. Therefore, the industry will present a development pattern of 'standardized automation +

high-end customization,' characterized by strong growth certainty, high technical and aesthetic thresholds, and a strong correlation with luxury consumption.
