The global E-ink Smart Notebooks market size is predicted to grow from US$ 1059 million in 2025 to US$ 1615 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

The e-ink smart notebook is an electronic device that integrates e-ink display technology with intelligent systems. It not only possesses the writing and recording functions of traditional notebooks but also boasts the smart interaction, information storage, and processing capabilities of electronic devices. It provides users with a writing experience close to that of paper while also fulfilling the diverse needs of digital office work, learning, and reading, making it a novel tool.

E-ink smart notebooks are a hybrid category that blends electronic ink display technology with digital handwriting, document management, and cloud synchronization, serving as a transitional tool between traditional paper notebooks and digital productivity solutions. These devices typically employ E Ink Carta or Kaleido displays, offering a paper-like writing experience, extremely low power consumption, long battery life, and excellent sunlight readability?ideal for eye-friendly reading and distraction-free note-taking. Compared to standard e-readers, E-ink smart notebooks provide a significantly enhanced interactive experience, often equipped with electromagnetic styluses, handwriting recognition, PDF annotation, notebook organization, and real-time cloud syncing. Advanced models feature multitasking windows, calendar functions, and speech-to-text, catering to light productivity needs. Key players include BOOX (Onyx), Remarkable, Kindle Scribe, iFlytek, Sony, and Motorola, with varying degrees of ecosystem openness and regional adaptation. While this market remains niche and faces challenges such as high unit cost and user onboarding hurdles, the value proposition of ?paperless efficiency? and ?digital learning tools? is becoming

increasingly clear. The demand is bolstered by trends in enterprise digitization, sustainable work environments, and education modernization. From a supply chain perspective, reliance on E Ink Holdings for display panels and the complexity of integrating handwriting and software layers are current constraints. However, with ongoing localization of key components, advancements in color e-ink, and improved software-user experience, the category is well-positioned to evolve into a robust ?hardware + content + service? ecosystem. In the long term, E-ink smart notebooks are likely to serve as a cornerstone device in the convergence of low-power computing, digital reading, and cloud-based note-taking.
