E-Methanol, also known as green methanol or renewable methanol, represents the next step in sustainable fuel technology. It is produced through environmentally friendly processes that utilize renewable energy sources, such as solar, wind, or hydroelectric power, to convert carbon dioxide and water into methanol. This innovative approach not only offers a renewable fuel option but also contributes to the reduction of atmospheric CO₂ levels, a key factor in combating climate change.

E-methanol consists of using low-carbon hydrogen, produced by means of water electrolysis, and carbon recycled from industrial processes (biomass boilers, incinerators, etc.), subsequently synthesised in a methanolation reactor, and distilled to achieve the desired purity.

The global E-methanol market size is projected to grow from US\$ 452 million in 2024 to US\$ 26860 million in 2030; it is expected to grow at a CAGR of 97.6% from 2024 to 2030.
