E-methanol to sustainable aviation fuel refers to the use of electricity generated by renewable energy to further process e-methanol (methanol synthesized from hydrogen and captured carbon dioxide) into fuel suitable for aviation engines. This process includes the conversion of methanol into synthesis gas, which is then used to generate aviation fuel through Fischer-Tropsch synthesis or other processes. This technology provides a low-carbon or even zero-carbon alternative, helping the aviation industry reduce carbon emissions and achieve sustainable development.

The global E-Methanol Sustainable Aviation Fuel market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
