The report requires updating with new data and is sent in 48 hours after order is placed.

E-methanol to sustainable aviation fuel refers to the use of electricity generated by renewable energy to further process e-methanol (methanol synthesized from hydrogen and captured carbon dioxide) into fuel suitable for aviation engines. This process includes the conversion of methanol into synthesis gas, which is then used to generate aviation fuel through Fischer-Tropsch synthesis or other processes. This technology provides a low-carbon or even zero-carbon alternative, helping the aviation industry reduce carbon emissions and achieve sustainable development.
