An E-Ticketing System is a digital platform that allows users to purchase, book, and manage tickets for various events, services, or transportation online. It eliminates the need for physical tickets and provides a convenient and efficient way for users to access and manage their tickets electronically.

E-Ticketing Systems are commonly used in the travel industry for booking flights, trains, buses, and other modes of transportation. They are also used for booking tickets for concerts, movies, sports events, and other entertainment activities.

The system typically involves a website or mobile application where users can browse available options, select their desired tickets, make payments, and receive electronic tickets via email or mobile app. The tickets can then be scanned or validated at the venue using a barcode or QR code.

E-Ticketing Systems offer several benefits, including convenience, time-saving, and flexibility for users. They also provide real-time availability and pricing information, as well as the ability to easily modify or cancel bookings. Additionally, they help reduce paper waste and streamline the ticketing process for event organizers and service providers.

United States market for E-Ticketing System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
