A toll booth's electronic toll collection (ETC) system is an automated system that uses sophisticated cameras and sensors to fulfill a variety of duties. When a vehicle goes through a toll booth, the ETC can record photos of the car's registration plate and scan the transponders affixed to vehicles to automatically collect the right toll. For toll collection and vehicle tracking, it employs innovative solutions such as video analytics, Dedicated Short-Range Communications (DSRC), Global Positioning System (GPS), and Global Navigation Satellite System (GNSS).
