An auricle orthosis is a medical device used to correct the shape of the auricle. It mainly consists of one or more auricle spacers made of plastic material and a headband connected to the auricle spacers. It can effectively change the shape of the ear. The shape and size of the auricle are used to treat and correct various auricular deformities.

Ear Correction Kits are easy to use, effective, safe and reliable, and do not require surgery or hospitalization. They are widely used in ear correction and plastic surgery for children and adults. As far as China is concerned, although the number of births continues to decline in the short term, as the domestic education, medical and other environment gradually improves, the number of births in our country is expected to rebound in the future. In addition, with the continuous development of the national economy, the continuous improvement of residents' income and consumption levels, and the improvement of medical and health conditions, people will pay more attention to auricular deformities in infants and young children in the future, and Ear Correction Kits will be introduced into more families. . Therefore, the domestic Ear Correction Kits industry has good prospects in the future.
