The auricular vagus nerve stimulator is a medical device that electrically stimulates the auricular branch of the vagus nerve. It is mainly used for auxiliary treatment of epilepsy, depression, pain, sleep disorders, anxiety and other diseases. Its principle is to control the symptoms by stimulating the auricular branch of the vagus nerve, affecting the neural activity of the brain, regulating the expression of neurotransmitters, and improving the blood flow in the brain. There are two types of ear vagus nerve stimulators: implantable and non-implantable. The advantage of the non-implantable type is that it is non-invasive, safe, convenient and effective. It can be worn on the ear through headphones or ear clips.
