The global Earth Leakage and Residual Current Safety Devices market size is predicted to grow from US$ 3440 million in 2025 to US$ 4902 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In an electrical circuit the power going into the circuits through the live wire should always be the same as the power returning through the neutral wire because it is travelling around a closed circuit. If there is a fault in the circuit and power is leaking away to earth somewhere then the power passing into the circuit through the live connection will not be the same as the power passing out of the circuit through the neutral wire. This difference is known as residual current. We place a small coil of wire around the live and neutral wires inside the switch which can detect if the power is different, it then uses this power difference or residual current to switch the power off.

United States market for Earth Leakage and Residual Current Safety Devices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
